#05101	Schutt Youth Air Standard III Football Helmet	X-Small, Small, Medium, Large, X-Large

STEP 1

Proper fit is essential for the most effective performance of any helmet system. The helmet functions as a system and must be properly fit for optimum performance. The player must be made aware of the importance of a proper fit. Measure the player's head as shown (1" above the eyebrows around the widest part of the head).

STEP 2

These helmets feature a standard 4-point high chin strip. The chin strap should be attached to the helmet underneath the faceguard, not above it. Tighten the chin strap so that it is snug and centered on the player's chin.

STEP 3

Jaw pads are another key component to properly fitting the helmet. The jaw pads should be snug against the player's face, flush with his jaw, without pushing too forcefully into his cheeks. Jaw pads are measured in thickness. Other sizes and styles are also available.

STEP 4

Properly fitted on a player, the helmet's front edge and nose bumper should be approximately 1" above the player's eyebrows. It is the interaction between the player and the person fitting the helmet that ensures proper fit and optimum helmet performance.

STEP 5

To ensure the helmet fits properly, try rotating the helmet on the player's head. It should not slip. The player's hair and skin on the forehead should move with the helmet as it's rotated, but the helmet should not move independently.
